HIGH

Batch Intelligence

Batch ID	BATCH-001
Inspection Time	2026-08-25 22:49:12.533000
Release Status	BLOCKED

Sensor Intelligence Dashboard

Moisture	305.0
Temperature	29.8 °C
Humidity	90.2 %

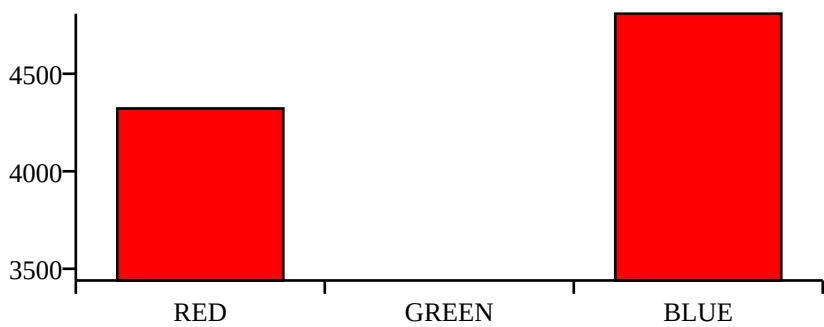

■ AI Root Cause Intelligence

Finding 1
Possible drying process variation or insufficient moisture control

Finding 2
Possible environmental storage condition variation

Finding 3
Possible roasting parameter variation

■ Coffee Color Intelligence

■ AI Recovery Workflow

STEP	ACTION	AI REASONING
STEP 1	Isolate batch before packaging	Quality evidence indicates batch requires correction before release.
STEP 2	Review drying condition and perform moisture level validation.	Moisture level variation detected identified from quality analysis.
STEP 3	Inspect storage environment and control humidity condition.	Storage humidity condition detected identified from quality analysis.
STEP 4	Review roasting consistency using RGB evidence.	Roasting inconsistency detected identified from quality analysis.
STEP 5	Perform AI quality validation again.	Confirm improvement before final production decision.

■ Future Prevention Strategy

- ✓ Maintain moisture control limits during processing
- ✓ Maintain controlled storage humidity conditions
- ✓ Monitor coffee colour variation using RGB analysis
